Dear Customer,

### **Webplicator Vault - Your Secure Off-site Remote Backup Account (Web Replicator)**

Seanic is proud to announce the first of its kind off-site redundant secure backup service, the '**Webplicator Vault**'.

#### **What is the Webplicator Vault ?**

The Webplicator Vault is a fail-safe geographically distributed, high availability, Secure Backup & Storage Service with it's servers located in Washington DC, over 1000 miles from the Primary Servers.

This unique solution will keep your website and emails online at a geographically separated location in the event of an outage at the primary location caused by natural disasters, freak accidents and other unforeseen incidents.

As we recognize the increasing importance of an uninterrupted online presence, Seanic will provide this service to all customers at **no extra charge**.

Seanic is now one of the first (if not the first) in the industry to provide a geographically distributed customer accessible backup account for each and every hosting account at no extra charge.

You will be provided with Website access, FTP access, Webmail, POP3, IMAP access for your Webplicator Vault backup account.

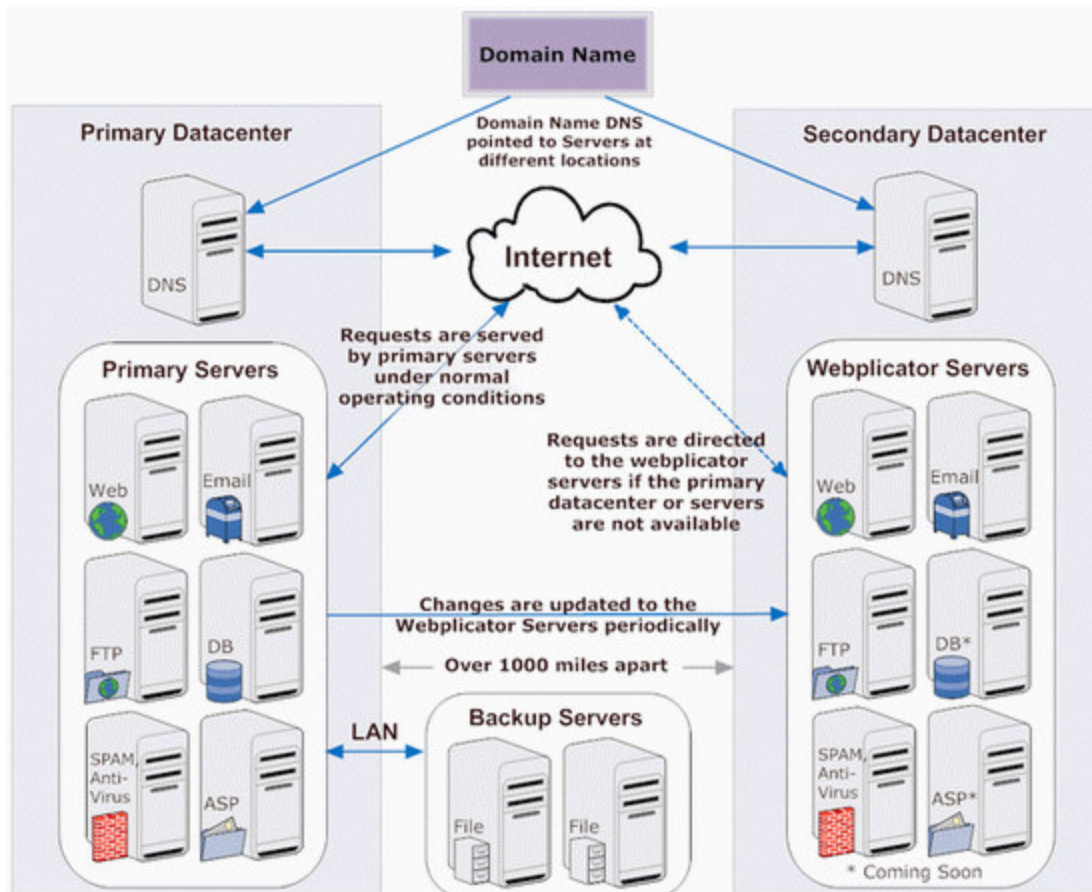

This means you will have two hosting account for your domain name at the price of one !

(one primary hosting account and a Webplicator Vault Backup Hosting Account, access information is in your account Control Panel)

#### **The Webplicator Vault Service Features:**

- One-click button to Replicate your Hosting account to your Webplicator Vault backup Account
- Secondary Website URL, FTP access, Webmail, POP3, IMAP access, just like your primary account
- Geographically separated, over 1000 miles from the primary servers for added protection.
- Auto switch-over in the event of a primary server outage. Your website & Email will stay up even if the primary servers are down.
- Best of all, it is provided exclusively by Seanic for all Seanic customers at no charge.

\* This service is currently not available for Windows & ASP Hosting Accounts but will be available soon !

A service similar service at other providers will cost hundreds to thousands of dollars per year. Most providers does not even provide a backup account.

This service is in addition to Seanic's existing on-site backup facility which will provide extra redundancy, security and up-time.

### Managing Your Webplicator Vault

A new menu has been added to your account control panel, you may use it to manage your Webplicator Vault Backup Account and to view your Webplicator Vault Backup Account access information (under the section 'backup account'). There you will be able to select your Webplicator Vault Backup Account update mode, either manual or automatic. You will also be able to update your Webplicator Vault Backup Account with the latest copy of your website at one click of a button.

For your convenience, the first Webplicator Vault Update has already been done for you.

### Accessing your Webplicator Vault

In general, you may access your Webplicator Vault copy of your website at <http://www1.yourdomain.com>. For FTP, Email and other access information to your Webplicator Vault, **please logon to your hosting control panel at <http://www.yourdomain.com/admin/>**.

A general FAQ is also available in the Control Panel.

Seanic's development team had worked tirelessly over the past 2 weeks to develop and deploy this service. After a fullweek of testing, the Webplicator Vault has performed up to expectations and we are now officially deploying it to our customers. This is not all, we have further plans to better enhance the Webplicator functionality and will keep you posted on its progress by updates in the Control Panel.

With the new Webplicator Service, Seanic has taken a big step closer towards 100% uninterrupted uptime availability, allowing us to provide you with the best possible hosting experience.

Thank you for continued support !
